Projects

Facial Recognition using Python

facial recognition -- is an artificial intelligence (AI) based computer technology used to find and identify human faces in digital images, A facial recognition system uses biometrics to map facial features from a photograph or video. It compares the information with a database of known faces to find a match.

Fake News Detection using Machine Learning

Fake news detection using machine learning is an active area of research and development. It involves training machine learning models to classify news articles or other types of textual content as either genuine or fake based on their features.
